EXECUTIVE SUMMARY

This investigation report documents the sampling activities at Area of Concern 222 (AOC 222) in the vicinity of Building 222, Naval Station Great Lakes (NAVSTA GL), Great Lakes, Illinois. This work was performed pursuant to Contract Number N40083-10-C-0043 and was completed to address contaminants identified during evaluation of releases from USTs at B229 that appeared to be attributable to previous operations and may not have been a release from the USTS. Initial samples indicating a potential environmental concern may be present in this area were collected in May of 2004 during LUST relative risk sampling. An Illinois Emergency Management Agency (IEMA) incident number has not been assigned to this site. Previous information related to the identification of contaminants at this location are noted in the Corrective Action Completion Report for IEMA Incident #990458, associated with the UST system located at Building 229 under Illinois EPA LPC#0971255004.

AOC 222 is located in the vicinity of Building 222, a small maintenance building located at the west end of Clark but previous operations in this area consisted of an incinerator, a foundry, two firing ranges, a temporary transformer storage area, and a pesticide storage location.

In May of 2004, six soil samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and total and synthetic precipitation leaching procedure (SPLP) RCRA metals along the west side of the B229 access road. Four water samples were also collected and analyzed for VOCs and RCRA metals. The sample results indicated significant soil contamination including VOCs, SVOCs and metals was present at location 229-GP6. No groundwater sample was collected at 229-GP6 however groundwater impacts were noted at the other sampling locations. Additional investigation was warranted because the soil sampling results from 229-GP6 exceeded the Illinois EPA guidelines for closure.

Soil and groundwater sampling was conducted in January and July of 2013 to determine the nature and extent of soil and groundwater impacts at AOC 222. The overall objective is to seek a no further remediation letter from the Illinois Environmental Protection Agency (Illinois EPA) by meeting the requirements of the Groundwater and Soil Remediation Objectives. Eight GeoProbe borings with temporary wells were completed at AOC 222 in January of 2013. Soil analyses were conducted for VOCs, SVOCs, total metals, SPLP lead, pH, and polychlorinated biphenyls (PCBs). Water analyses included VOCs, SVOCs, PCBs, metals, and dissolved metals. Seven additional GeoProbe borings with temporary wells were completed in July of 2013. Soil analyses were conducted for VOCs, SVOCs, total metals, SPLP lead and pH. Water analyses included VOCs, SVOCs, metals, and dissolved metals.

Analytical results from the soil samples were compared to the Illinois EPA TACO soil remediation objectives (SROs).

- Although 229-GP6 reported VOCs including tetrachloroethene present in soils at concentrations significantly above SROs, only B222J had detectable levels of tetrachlorethene, and present at concentrations slightly in excess of SROs.
- SVOCs were reported in soil samples from ten of the fifteen borings completed in 2013 and in the 229-GP6 boring completed in 2004. Of the samples collected in 2013, benzo(a)pyrene exceeded SROs at four locations while benzo(b)fluoranthene, and dibenzo(a,h)anthracene were reported at one locations at concentrations in excess of

SROs. The sample from 229-GP6 exceeded SROs for additional SVOCs and had the highest overall SVOC concentrations of any of the samples collected.

- Eight RCRA metals, including arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver were reported in site soils. Two samples exceeded SROs for arsenic. Three samples exceeded SROs for lead for soil ingestion and four samples exceeded SROs for lead for Class I of the pH Specific Soil Component of the Groundwater Ingestion Exposure Route Value. Five samples exceeded SROs for mercury for the soil inhalation standard for construction workers. One sample exceeded the SRO for selenium for Class I of the pH Specific Soil Component of the Groundwater Ingestion Exposure Route Value.
- SPLP lead exceeded the 0.0075 mg/kg published value for Class I SRO for Residential Properties for four of the samples collected, however the SPLP lead levels were less than the Class II published value of 0.1 mg/kg.
- No PCBs were reported above the method detection limits in the soil samples, thus no SROs for PCBs were exceeded.

Analytical results from the groundwater samples collected in 2013 indicate that:

- VOCs were not reported in groundwater from the temporary wells sampled, thus no GROs were exceeded.
- SVOCs were not reported in groundwater from the eleven wells sampled, thus no GROs were exceeded.
- Analysis of total RCRA metals was conducted at fourteen wells and dissolved (filtered) RCRA metals were analyzed at twelve well locations. Five of the eight RCRA metals (arsenic, barium, chromium, lead, and selenium) were detected above the method detection limit in unfiltered groundwater. Lead was the only RCRA metal reported at concentrations in excess of GROs in the unfiltered samples. None of the twelve filtered samples exceeded the GRO for lead indicating the high sediment content in the groundwater is the source of the lead.
- PCBs were not reported in the groundwater from the seven wells sampled, thus no GROs were exceeded.

The fill material/soil in AOC 222 is diverse. No clear pattern of impacts is identifiable and it is anticipated that contaminants are likely related to the various fill materials encountered at the site. The absence of impacts that exceed GROs at AOC 222 indicate contaminants are not significant in groundwater in this area. This provides additional evidence that the contaminants noted in soil in this area are likely related to the various fill materials encountered at the site and are unlikely to present significant environmental concern.

A No Further Remediation Letter is requested for this site. Land Use Controls have been developed incorporating the groundwater use restriction mandated by the Naval Station Great Lakes Instruction 11130.1, and existing Land Use Control Memorandum of Agreement (LUC MOA) between the Navy and Illinois EPA.

1.0 INTRODUCTION

This investigation report documents the sampling activities at Area of Concern 222 (AOC 222) in the vicinity of Building 222, Naval Station Great Lakes (NAVSTA GL), Great Lakes, Illinois (Figure 1). This investigation was performed pursuant to Contract Number N40083-10-C-0043. It was completed to address contaminants identified during evaluation of releases from USTs at B229 that appeared to be attributable to previous operations and may not have been a release from the USTs. The investigation included soil sampling via Geoprobe and installation of temporary monitoring wells.

The initial samples indicating potential environmental concern may be present in this area were collected in May of 2004 by TolTest, Inc. during LUST relative risk sampling. Bloom conducted Geoprobe investigation to define the potential impacts in January and July of 2013. This report is intended to confirm the nature and extent of soil and groundwater contamination, if any, resulting from past operations at this location. An Illinois Emergency Management Agency (IEMA) incident number has not been assigned to this site. Previous information related to the identification of contaminants at this location are noted in the Corrective Action Completion Report for IEMA Incident #990458, associated with the UST system located at Building 229 under Illinois EPA LPC#0971255004 (TolTest, Inc., 2006).

AOC 222 is located in the vicinity of Building 222 (Figure 2). Building 222 is a small maintenance building located at the west end of Clark Avenue at the Naval Station Great Lakes, Lake County, Illinois. The site is located at N42.316600°, W87.842800°. The site is surrounded by Navy property in all directions. The local geography consists of Building 229 to the east, a small recreation area with volleyball nets and horseshoe pits to the north, and gravel covered parking and storage area to the south. Sheridan Avenue borders the Navy property about 150 feet to the west of AOC 222. The local topography at AOC 222 is relatively flat, with a topographic drop to the west between the unpaved roadway west of Building 222 and Sheridan Avenue. This location is currently a maintenance facility but previous operations in this area consisted of an incinerator, a foundry, two firing ranges, a temporary transformer storage area, and a pesticide storage location.

In May of 2004, soil and groundwater samples were collected west of B229 during LUST relative risk sampling indicating a potential environmental concern may be present in this area. Samples for laboratory analysis were taken along the west side of the B229 access road. Six soil samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and total and synthetic precipitation leaching procedure (SPLP) RCRA metals. Four water samples were collected and analyzed for VOCs and RCRA metals. Sample locations and results of analyses are included in Appendix A. The sample results indicate significant soil contamination including VOCs, SVOCs and metals was present at location 229-GP6. No groundwater sample was collected at the 229-GP6 location. Additional investigation was warranted because the soil sampling results from 229-GP6 exceeded the Illinois EPA guidelines for closure.

This report summarizes the soil and groundwater sampling conducted in January and July of 2013 to determine the nature and extent of soil and groundwater impacts at AOC 222.

2.0 GEOLOGY

2.1 Regional Geology

According to Hansel & Johnson (Illinois State Geologic Survey (ISGS) Bulletin 104, 1996), the site overlies Lake Plain sediments of Wisconsin Pleistocene Age. The Lake Plain sediments consist of predominantly silty clay deposits, and may contain thin beds of sand and gravel. These fine-grained sediments are over 20 feet thick in this area, and may be interbedded with similar silty clay till of the Wadsworth formation. Bedrock beneath the site dips to the east at 10 to 15 feet per mile and consists of the Paleozoic Silurian dolomite of the Racine Formation, approximately 150 to 200 feet thick.

2.2 Site Stratigraphy

The AOC 222 area is characterized by eight to more than twenty feet of non-native fill material underlain by native soil consisting of silts and clayey silts, which in turn overly clay. Maximum depths of borings conducted in this area were 20 feet below ground surface (bgs).

2.3 Regional Hydrogeology

Hydrogeology of the Great Lakes area is characterized by three major potable aquifer systems: (1) glacial; (2) shallow bedrock (Silurian Dolomite); (3) deep bedrock (Ordovician or Cambrian Sandstone). In addition to these three major potable aquifer systems, shallow near-surface groundwater typically occurs in various areas of the Chicago and surrounding areas within 20 feet of the ground surface. The potable aquifer systems lie deeper than the limits of this investigation and shallow water bearing units above the bedrock are not hydraulically connected to deeper aquifers. Potable water is supplied to the Navy Base by the bases own water treatment plant that obtains its source water from Lake Michigan.

2.4 Site Hydrogeology

The *Potential for Contamination of Shallow Aquifers from Land Burial of Municipal Wastes* identified the site within an area of a Type E geologic sequence. The potential for contamination in Type E areas is low because of low hydraulic conductivity, typically 1×10^{-9} to 1×10^{-7} centimeters per second (cm/sec), and good attenuation capacities.

2.5 Remediation Objectives

The groundwater at the site meets the criteria for Class II: General Resource Groundwater in accordance with Title 35 of the Illinois Administrative Code, Part 620, Section 620.220 based on the following information:

- According to the *Potential for Contamination of Shallow Aquifers from Land Burial of Municipal Wastes* the site is within a Type E geologic sequence which has a hydraulic conductivity less than Class I water bearing soil of 1×10^{-4} cm/sec.

-
- Extremely slow well recover during groundwater sampling confirmed the shallow aquifer hydraulic conductivity was likely on the order of 1.0×10^{-5} cm/sec, which is in the typical range for silty clays and clayey sands.
 - No unconsolidated sand, gravel, or sand-gravel layer, which is 5 feet or more in thickness, was identified during any of the investigations conducted by Bloom.
 - No sandstone layer, which is 10 feet or more in thickness or fractured carbonate layer which is 15 feet or more in thickness, was encountered during any of the environmental investigations.
 - The site is not located within a Groundwater Management Zone (Class 4 groundwater) and no Special Resource Groundwater (Class 3) has been designated for this area.

3.0 SOIL CLOSURE SAMPLING

3.1 Previous Site Investigations

In May of 2004, soil and groundwater samples collected west of B229 during LUST relative risk sampling indicated a potential environmental concern may be present in this area. Samples for laboratory analysis were taken along the west side of the B229 access road. Six soil samples were collected and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and total and synthetic precipitation leaching procedure (SPLP) RCRA metals. The sample results indicated significant soil contamination including VOCs, SVOCs and metals was present at location 229-GP6. Additional investigation was warranted because the soil sampling results from 229-GP6 exceeded the Illinois EPA SROs for closure. Sample locations and results of analyses are included in Appendix E. The potentially contaminated area southwest of B229 identified through 229-GP6 sampling is referenced as AOC 222.

An Illinois Emergency Management Agency (IEMA) incident number has not been assigned to this site. Previous information related to the identification of contaminants at this location are noted in the Corrective Action Completion Report for IEMA Incident #990458, associated with the UST system located at Building 229 under Illinois EPA LPC#0971255004.

AOC 222 is located in the vicinity of Building 222. This location is currently a maintenance facility but previous operations in this area consisted of an incinerator, a foundry, two firing ranges, a temporary transformer storage area, and a pesticide storage location.

3.2 Soil Sampling Locations

Geoprobe investigation to define soil impacts at AOC 222 took place in January and July of 2013. Eight boring locations were complete in January and seven in July to define the nature and extent of impacts present in AOC 222. Upon completion of the Geoprobe soil borings, temporary 1-inch polyvinyl chloride (PVC) monitoring wells were installed for the purpose of collecting groundwater samples and measuring groundwater elevations. The boring locations are shown on Figure 2 in Appendix A.

3.3 Sampling Methodology

The soil borings were advanced to approximately 20-25 feet bgs via direct push method using a Geoprobe[®] rig and macro-core sampler. Soil samples were collected on a continuous basis using a 2-inch direct push spoon sampler equipped with a disposable acetate liner. Each soil boring was given a unique identification number and the Bloom geologist documented the boring activities using soil boring log forms. The soil was classified on the boring logs indicating lithologic descriptions and Unified Soil Classification System descriptions (based upon visual evaluation), degree of sorting, sedimentary contacts, relative moisture content, photoionization detector (PID) readings, etc. Soil boring logs for the closure confirmation sampling are provided in Appendix B.

Samples were collected at 2-foot intervals from the borehole. The samples were placed into two large self-sealing plastic bags. The first was filled as full as possible to eliminate as much air as

possible from the bag. While filling the self-sealing plastic bags, care was taken to minimize the amount of disturbance to the soil. After filling the first bag it was sealed and placed on ice. The headspace of the second bag was analyzed with a PID after 10-20 minutes. Soil samples were submitted for analysis from the layer with the highest PID readings, odor or highest visible contamination as described below. If no contamination was observed visually or with a PID, a soil sample was collected from the unsaturated zone immediately above the watertable to document site conditions. Soil analyses were conducted for VOCs, SVOCs, total metals, SPLP lead, pH, and PCBs.

Samples for VOC analysis were collected using Encore™ sampling devices. The following procedures were followed:

1. Removed sampler from the package and attached T-handle to the sampler body.
2. Quickly pushed the sampler into the soil until the sampler (coring body) was completely full (observe O-ring in viewing window).
3. Removed the sampler from the soil and wiped excess soil from the coring body exterior.
4. Pushed the cap on with a twisting motion to firmly attach the cap. Pushed and twisted over the bottom until the locking arms seated over the ridge on the sampler body.
5. Completely filled out the label (from the EnCore™ sampler bag) and attached it to the sampler.
6. Returned the sample-filled sampler to a self-sealing bag. Sealed the bag and stored the samples immediately on ice.

Samples were collected with clean pair of nitrile disposable sampling gloves and transferred to the appropriate sample containers. The sample jars were quickly capped. The labels were completely filled out and attached to the sample jars. The sample jars were placed in zip lock plastic bags and placed in an iced cooler held at a temperature below 4°C for transportation to the laboratory by the designated courier.

3.4 Sample Results

Eight soil samples were evaluated in January for VOCs, SVOCs, total metals, SPLP lead, pH and PCBs. Seven additional soil samples were evaluated in July for VOCs, SVOCs, total metals, SPLP lead, and pH. Illinois EPA Tiered Approach to Corrective Action Objectives (TACO) soil remediation objectives (SROs) provided in 35 IAC Section 742 for Residential Properties were determined by using the lowest or most conservative values from within all the listed exposure pathways while taking into account the background values. Background values are provided in 35 IAC Section 742 Appendix A Table G for RCRA metals and Appendix A Table H for SVOCs. The SROs, including Tables G and H background levels from the TACO regulations for the primary contaminants of concern at this site, are shown on the applicable soil results summary tables (Tables 1-5) in Appendix C.

VOCs - Several VOCs were reported in soil from one or more locations including benzene, carbon disulfide, ethyl benzene, tetrachloroethene and toluene. Only tetrachloroethene was

reported to be present at concentrations in excess of SROs. Tetracholorethene was reported at 229-GP6 in the May 2004 sample and at B222J in the 2013 sample (Table 1; Figure 3).

SVOCs - SVOCs were reported in soil samples from ten of the fifteen borings completed in 2013 and in the 229-GP6 boring completed in 2004. Of the samples collected in 2013, only benzo(a)pyrene, benzo(b)fluoranthene, and dibenzo(a,h)anthracene were reported at one or more locations at concentrations in excess of the Appendix B Table A Tier 1 SRO for residential properties. Benzo(a)pyrene was reported at 0.135 mg/kg at B222E, at 0.21 mg/kg at B222G, at 0.498 mg/kg at B222J and at 0.629 mg/kg at B222K which exceeds the 0.09 mg/kg SRO for residential ingestion but is less than the 0.8 mg/kg industrial/commercial SRO (Table 2; Figure 4). Benzo(a)pyrene was also reported at 229-GP6 at 3.5 mg/kg in the sample collected in 2004. Two additional compounds were also reported at B222K, including benzo(b)fluoranthene at 1.11 mg/kg exceeding the SRO of 0.09 mg/kg and dibenzo(a,h)anthracene at 0.12 mg/kg exceeding the SRO of 0.09 mg/kg. 35 IAC Section 742 Appendix A Table H lists Background Concentrations for PAHs in metropolitan and non-metropolitan area soils. Benzo(a)pyrene background concentrations are listed at 0.98 mg/kg for non-metropolitan areas and 2.1 mg/kg for metropolitan areas. AOC 222 is located within Lake County which is classified as a metropolitan area. All soil samples analyzed in 2013 for benzo(a)pyrene for this investigation were reported at concentrations below the listed background concentrations for metropolitan and non-metropolitan areas. The sample from 229-GP6 exceeded SROs for additional SVOCs and had the highest overall SVOC concentrations of any of the samples collected.

Metals - Eight RCRA metals, including arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver were reported in site soils. Soil remediation objectives for the exposure routes (i.e., soil ingestion exposure route, inhalation exposure route, and soil component of the groundwater ingestion exposure route) were used to compare the concentrations of soil contaminants of concern (Table 3 and Figures 5 and 6). The SRO for inorganic metals for the soil component of the groundwater ingestion route was determined from 35 IAC Section 742 Appendix B Table C.

Arsenic - Soil samples from B222D and B222E exceeded SROs for arsenic for soil ingestion and from B222E for Class I of the pH Specific Soil Component of the Groundwater Ingestion Exposure Route Value.

Lead - Soil samples from B222E, B222J and B222N exceeded SROs for lead for soil ingestion and samples from 229-GP6, B222E, B222J and B222N exceeded SROs for lead for Class I of the pH Specific Soil Component of the Groundwater Ingestion Exposure Route Value.

Mercury – Five samples, 229-GP6, B222A, B222B, B222C and B222J exceeded SROs for the soil inhalation standard for construction workers.

Selenium - The soil sample from B222N exceeded the SRO for Class I of the pH Specific Soil Component of the Groundwater Ingestion Exposure Route Value.

None of the other samples analyzed exceeded SROs for the applicable exposure pathways.

Table 3 summarizes the results and compares them to the SROs including values from Tables C and D in Appendix B in TACO and background concentrations published in 35 IAC Section 742

Appendix A Table G, Concentrations of Inorganic Chemicals in Background Soils, Counties Within Metropolitan Statistical Areas.

SPLP lead - SPLP lead exceeded the 0.0075 mg/kg published value for Class I SRO for Residential Properties for the samples collected from B222B; B222C, B222E and B222N, however the SPLP lead levels were less than the Class II published value of 0.1 mg/kg (Table 4; Figure 6).

PCBs - No PCBs were reported above the method detection limits in the soil samples, thus no SROs for PCBs were exceeded (Table 5).

Tables summarizing soil sample results and comparison to the SROs and background values from Tables G and/or H of Appendix A in TACO are provided in Appendix C as Tables 1 through 5 and laboratory soil analytical data is included as Appendix D.

4.0 GROUNDWATER SAMPLING

4.1 Previous Site Investigations

In May of 2004, soil and groundwater samples collected west of B229 during LUST relative risk sampling indicated a potential environmental concern may be present in this area. Samples for laboratory analysis were taken along the west side of the B229 access road. Five water samples were collected and analyzed for VOCs and RCRA metals. The sample results indicated several VOCs including toluene and methylene chloride were widespread and trichlorofluoromethane and bis(2-ethylhexyl)phthalate were each reported at one location. Toluene and methylene chloride exceeded GROs at all five locations. Bis(2-ethylhexyl)phthalate exceeded the GRO at one location. Seven of the eight RCRA metals were also reported in one or more of the water samples, with arsenic, barium, chromium, and lead present at concentrations that exceed GROs. Highest levels of soil contamination including VOCs, SVOCs and metals were reported at location 229-GP6 but no groundwater sample was submitted for analysis from the 229-GP6 location. Sample locations and results of analyses are included in Appendix E.

4.2 Groundwater Sampling

Temporary wells were installed at eight locations for groundwater sampling in January 2013 and at seven additional locations in July of 2013. Groundwater elevations were measured on January 18 and 24, and July 15, 2013. The watertable configuration at AOC 222 was evaluated. Two of the wells near the center of the AOC222 had groundwater elevations more than eight feet lower than measured at the north and south ends of AOC 222. The groundwater elevations are presented on Table 5 and watertable configuration, as measured on July 15, 2013 is presented on Figure 8. The variations in fill material at the site appear to control the watertable configuration.

Groundwater analysis was conducted for VOCs, SVOCs, total metals, dissolved metals, and PCBs in January 2013 and for VOCs, SVOCs, total metals and dissolved metals in July 2013. Temporary monitoring wells were purged prior to collecting groundwater samples. Temporary well B222D did not produce adequate water for sample collection. Temporary wells B222E, B222I and B222K had minimal water and required several days following purging to recover; samples from these locations did not include analysis for SVOCs and/or filtered RCRA metals. Analytical results for groundwater samples collected from the temporary wells were compared to the Illinois EPA TACO groundwater remediation objectives (GROs) for Class I. Tables 7 through 10 in Appendix C summarize the analysis results and compare them to GROs. The laboratory groundwater analytical data is included as Appendix D.

VOCs - VOCs were not reported in groundwater from the temporary wells sampled for this parameter, thus no GROs were exceeded (Table 7).

SVOCs – SVOCs were not reported in groundwater from the eleven wells sampled, thus no GROs were exceeded (Table 8).

Metals – Fourteen temporary wells were sampled for total metals and twelve temporary well locations provided adequate water for collection of dissolved (filtered) metals samples. Adequate water was not present at B222D, B222E or B222I for collection of a filtered sample at

these locations. Five of the eight RCRA metals (arsenic, barium, chromium, lead, and selenium) were detected above the method detection limit in unfiltered groundwater (Table 9; Figure 7). Lead was the only RCRA metal reported at concentrations in excess of GROs in the unfiltered samples. When samples were collected sediment was clearly present in the water. High silt and clay content of the subsurface materials in combination with the very low water recharge rates made sediment free sample collection impossible. None of the twelve filtered samples exceeded the GRO for lead indicating the high sediment content in the groundwater is the source of the lead.

PCBs - PCBs were not reported in the groundwater from the seven wells sampled, thus no GROs were exceeded (Table 10).

5.0 CONCLUSIONS AND RECOMMENDATIONS

Soil - Analytical results from the soil samples collected in 2013 indicate that:

- Although 229-GP6 reported VOCs including tetrachloroethene present in soils at concentrations significantly above SROs, only B222J had detectable levels of tetrachlorethene, and present at concentrations slightly in excess of SROs.
- SVOCs were reported in soil samples from ten of the fifteen borings completed in 2013 and in the 229-GP6 boring completed in 2004. Of the samples collected in 2013, benzo(a)pyrene exceeded SROs at four locations while benzo(b)fluoranthene, and dibenzo(a,h)anthracene were reported at one locations at concentrations in excess of SROs. The sample from 229-GP6 exceeded SROs for additional SVOCs and had the highest overall SVOC concentrations of any of the samples collected.
- Eight RCRA metals, including arsenic, barium, cadmium, chromium, lead, mercury, selenium and silver were reported in site soils. Two samples exceeded SROs for arsenic. Three samples exceeded SROs for lead for soil ingestion and four samples exceeded SROs for lead for Class I of the pH Specific Soil Component of the Groundwater Ingestion Exposure Route Value. Five samples exceeded SROs for mercury for the soil inhalation standard for construction workers. One sample exceeded the SRO for selenium for Class I of the pH Specific Soil Component of the Groundwater Ingestion Exposure Route Value.
- SPLP lead exceeded the 0.0075 mg/kg published value for Class I SRO for Residential Properties for four of the samples collected, however the SPLP lead levels were less than the Class II published value of 0.1 mg/kg.
- No PCBs were reported above the method detection limits in the soil samples, thus no SROs for PCBs were exceeded.

The fill material/soil in AOC 222 is diverse. No clear pattern of impacts is identifiable and it is anticipated that contaminants are likely related to the various fill materials encountered at the site.

Groundwater - Analytical results from the groundwater samples collected in 2013 indicate that:

- VOCs were not reported in groundwater from the temporary wells sampled, thus no GROs were exceeded.
- SVOCs were not reported in groundwater from the eleven wells sampled, thus no GROs were exceeded.
- Analysis of total RCRA metals was conducted at fourteen wells and dissolved (filtered) RCRA metals were analyzed at twelve well locations. Five of the eight RCRA metals (arsenic, barium, chromium, lead, and selenium) were detected above the method detection limit in unfiltered groundwater. Lead was the only RCRA metal reported at concentrations in excess of GROs in the unfiltered samples. None of the twelve filtered

samples exceeded the GRO for lead indicating the high sediment content in the groundwater is the source of the lead.

- PCBs were not reported in the groundwater from the seven wells sampled, thus no GROs were exceeded.

The absence of impacts that exceed GROs at AOC 222 indicate contaminants are not significant in groundwater in this area. This provides additional evidence that the contaminants noted in soil in this area are likely related to the various fill materials encountered at the site and are unlikely to present significant environmental concern.

The 35 IAC Part 742 Section 742.500 b), states “although Tier 1 allows for differentiation between residential and industrial/commercial property use of a site, an institutional control under Subpart J is required where remediation objectives are based on an industrial/commercial property use.” Since the site did not meet the residential standards and does not meet the definition of residential property per the 35 IAC Part 742, the site was evaluated under the industrial/commercial standards which is consistent with the current land use. The compounds of concern that did not meet the residential standards, with the exception of lead in soil at B222E, B222J and B222N, were in compliance with the industrial/commercial standards.

Per the 35 IAC Subpart J, institutional controls must be placed on the property when remediation objectives are based on factors which include industrial/commercial property use. The institutional controls proposed would restrict site use to industrial/commercial and prohibit groundwater use.

AOC 222 is currently occupied by Building 222 and associated storage and currently is used for industrial/commercial purposes.

The Navy has already adopted a groundwater use restriction base wide. This has been documented in a letter dated September 29, 2003 prepared by the Navy. A copy of the Naval Station Great Lakes Instruction 11130.1 “Ground Water Use Restriction” is included in Appendix F.

A No Further Remediation Letter is requested for this site based on the Land Use Controls to be developed for this site, the groundwater use restriction mandated by the Naval Station Great Lakes Instruction 11130.1, and existing Land Use Control Memorandum of Agreement (LUC MOA) between the Navy and Illinois EPA. This site will be added to the LUC MOA. After approval of the NFA, the temporary monitor wells will be abandoned in place in accordance with State law.

RE Bloom Great Lakes Soil

Lab Orders:
13010185 13010230

Dear Ms. Judy Fassbender:

Enclosed are the analytical reports for the EMT Lab Orders listed. Also included with this analytical report is a copy of the chain of custody associated with these samples. If you have any questions, please contact me at 847-967-6666.

Sincerely,

A handwritten signature in black ink, appearing to read "Nathan Fey".

Nathan Fey
Project Manager

Approved by,

A handwritten signature in black ink, appearing to read "Marilyn Krueding".

Marilyn Krueding
Laboratory Director

This Report Contains 45 pages

The Contents of this report apply to the sample(s) analyzed. No duplication is allowed except in its entirety.

maintains A2LA accreditation to ISO/IEC 17025 for the specific tests listed in A2LA certificate # 2407.02, demonstrating the laboratory's compliance with ISO/IEC 17025, the 2003 NELAC Chapter 5 Standard, and the requirements of the DoD Environmental Laboratory Accreditation Program (DoD ELAP) as detailed in the current DoD QSM for Environmental Laboratories.

CASE NARRATIVE

Lab Orders: 13010185 13010230

Unless otherwise noted, samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846, 3rd Edition

Unless otherwise noted, all method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives.

Sample results relate only to the analytes of interest tested and to the sample received at the laboratory.

All results are reported on a wet weight basis, unless otherwise noted. Dry weight adjusted results, reporting limits, method detection limits and dilution factors are indicated by the notation "dry" in the units column. If present, a dilution factor will adjust the method detection limits and reporting limits.

The test results contained in this report meet all of the requirements of NELAC. Accreditation by the State of Illinois or Wisconsin is not an endorsement or a guarantee of the validity of data generated. For specific information regarding EMT's scope of accreditation , please contact your EMT project manager.

The Reporting Limit listed on the Report of Laboratory Analysis is EMT's reporting limit for the analyte reported. For most test methods this reporting limit is primarily based upon the lowest point in the calibration curve.

Analyst's initials of "OUT" indicate that the analyte was analyzed by a subcontracted laboratory.

CASE NARRATIVE

Lab Orders: 13010185 13010230

Analytical Comments for METHOD 8270_SSON, 13010185-01A: Surrogate recoveries were below the laboratory limits.

Analytical Comments for METHOD 8270_SSON, 13010185-02A: The reporting limits have been increased due to high concentration of some target and non-target compounds and sample dilution.

Analytical Comments for METHOD 8270_SSON, 13010185-03A: The reporting limits have been increased due to high concentration of some target and non-target compounds and sample dilution.

Analytical Comments for METHOD 6020_SPLP_LIST, 13010230-02AMSD: MSD recovery was above the laboratory control limit.

Analytical Comments for METHOD 8270_SSON, 13010230-01A: The reporting limits have been increased due to high concentration of some target and non-target compounds and sample dilution.

Lab Orders:
13010459 13010462

Dear Ms. Judy Fassbender:

Enclosed are the analytical reports for the EMT Lab Orders listed. Also included with this analytical report is a copy of the chain of custody associated with these samples. If you have any questions, please contact me at 847-967-6666.

Sincerely,

A handwritten signature in black ink.

Nathan Fey
Project Manager

Approved by,

A handwritten signature in black ink.

Marilyn Krueding
Laboratory Director

This Report Contains 24 pages

The Contents of this report apply to the sample(s) analyzed. No duplication is allowed except in its entirety.

maintains accreditation PJLA accreditation to ISO/IEC 17025 for the specific tests listed in PJLA certificate no. L13-6, demonstrating compliance with ISO/IEC 17025, the 2003 NELAC Chapter 5 Standard, and the requirements of the DoD Environmental Laboratory Accreditation Program (DoD ELAP) as detailed in the current DoD QSM for Environmental Laboratories.

CASE NARRATIVE

Lab Orders: 13010459 13010462

Unless otherwise noted, samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846, 3rd Edition

Unless otherwise noted, all method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives.

Sample results relate only to the analytes of interest tested and to the sample received at the laboratory.

All results are reported on a wet weight basis, unless otherwise noted. Dry weight adjusted results, reporting limits, method detection limits and dilution factors are indicated by the notation "dry" in the units column. If present, a dilution factor will adjust the method detection limits and reporting limits.

The test results contained in this report meet all of the requirements of NELAC. Accreditation by the State of Illinois or Wisconsin is not an endorsement or a guarantee of the validity of data generated. For specific information regarding EMT's scope of accreditation , please contact your EMT project manager.

The Reporting Limit listed on the Report of Laboratory Analysis is EMT's reporting limit for the analyte reported. For most test methods this reporting limit is primarily based upon the lowest point in the calibration curve.

Analyst's initials of "OUT" indicate that the analyte was analyzed by a subcontracted laboratory.

CASE NARRATIVE

Lab Orders: 13010459 13010462

Analytical Comments for METHOD 8270_WNEW, 13010459-04A: Surrogate recoveries were below the laboratory limits. The reporting limits for some compounds are based on MDL values.

Analytical Comments for METHOD 8270_WNEW, 13010459-05A: The reporting limits for some compounds are based on MDL values.

Analytical Comments for METHOD 8270_WNEW, 13010459-06A: Acid surrogate recoveries were below the laboratory limits. The reporting limits for some compounds are based on MDL values.

RE Bloom Great Lakes GW

Lab Orders:
13010459 13010462

Dear Ms. Judy Fassbender:

Enclosed are the analytical reports for the EMT Lab Orders listed. Also included with this analytical report is a copy of the chain of custody associated with these samples. If you have any questions, please contact me at 847-967-6666.

Sincerely,

A handwritten signature in black ink, appearing to read "Ethan Fey".

Ethan Fey
Project Manager

Approved by,

A handwritten signature in black ink, appearing to read "Marilyn Krueding".

Marilyn Krueding
Laboratory Director

This Report Contains 24 pages

The Contents of this report apply to the sample(s) analyzed. No duplication is allowed except in its entirety.

maintains accreditation PJLA accreditation to ISO/IEC 17025 for the specific tests listed in PJLA certificate no. L13-6, demonstrating compliance with IEC 17025, the 2003 NELAC Chapter 5 Standard, and the requirements of the DoD Environmental Laboratory Accreditation Program (DoD ELAP) as detailed in the current DoD QSM for Environmental Laboratories.

CLIENT: Bloom Companies, LLC
Project: Bloom Great Lakes GW
Lab Orders: 13010459 13010462

Date: 1/29/2013

CASE NARRATIVE

Unless otherwise noted, samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846, 3rd Edition

Unless otherwise noted, all method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives.

Sample results relate only to the analytes of interest tested and to the sample received at the laboratory.

All results are reported on a wet weight basis, unless otherwise noted. Dry weight adjusted results, reporting limits, method detection limits and dilution factors are indicated by the notation "dry" in the its column. If present, a dilution factor will adjust the method detection limits and reporting limits.

The test results contained in this report meet all of the requirements of NELAC. Accreditation by the State of Illinois or Wisconsin is not an endorsement or a guarantee of the validity of data generated. For specific information regarding EMT's scope of accreditation , please contact your EMT project manager.

The Reporting Limit listed on the Report of Laboratory Analysis is EMT's reporting limit for the analyte reported. For most test methods this reporting limit is primarily based upon the lowest point in the calibration curve.

Analyst's initials of "OUT" indicate that the analyte was analyzed by a subcontracted laboratory.

Method References:

CASE NARRATIVE

Lab Orders: 13010459 13010462

Analytical Comments for METHOD 8270_WNEW, 13010459-04A: Surrogate recoveries were below the laboratory limits. The reporting limits for some compounds are based on MDL values.

Analytical Comments for METHOD 8270_WNEW, 13010459-05A: The reporting limits for some compounds are based on MDL values.

Analytical Comments for METHOD 8270_WNEW, 13010459-06A: Acid surrogate recoveries were below the laboratory limits. The reporting limits for some compounds are based on MDL values.

RE Bloom Great Lakes GW

Lab Orders:
13010570 13010624

Dear Ms. Judy Fassbender:

Enclosed are the analytical reports for the EMT Lab Orders listed. Also included with this analytical report is a copy of the chain of custody associated with these samples. If you have any questions, please contact me at 847-967-6666.

Sincerely,

A handwritten signature in black ink, appearing to read "Nathan Fey".

Nathan Fey
Project Manager

Approved by,

A handwritten signature in black ink, appearing to read "Marilyn Krueding".

Marilyn Krueding
Laboratory Director

This Report Contains 29 pages

The Contents of this report apply to the sample(s) analyzed. No duplication is allowed except in its entirety.

maintains accreditation PJLA accreditation to ISO/IEC 17025 for the specific tests listed in PJLA certificate no. L13-6, demonstrating compliance with IEC 17025, the 2003 NELAC Chapter 5 Standard, and the requirements of the DoD Environmental Laboratory Accreditation Program (DoD ELAP) as detailed in the current DoD QSM for Environmental Laboratories.

CLIENT: Bloom Companies, LLC
Project: Bloom Great Lakes GW
Lab Orders: 13010570 13010624

Date: 1/31/2013

CASE NARRATIVE

Unless otherwise noted, samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846, 3rd Edition

Unless otherwise noted, all method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives.

Sample results relate only to the analytes of interest tested and to the sample received at the laboratory.

All results are reported on a wet weight basis, unless otherwise noted. Dry weight adjusted results, reporting limits, method detection limits and dilution factors are indicated by the notation "dry" in the results column. If present, a dilution factor will adjust the method detection limits and reporting limits.

The test results contained in this report meet all of the requirements of NELAC. Accreditation by the State of Illinois or Wisconsin is not an endorsement or a guarantee of the validity of data generated. For specific information regarding EMT's scope of accreditation , please contact your EMT project manager.

The Reporting Limit listed on the Report of Laboratory Analysis is EMT's reporting limit for the analyte reported. For most test methods this reporting limit is primarily based upon the lowest point in the calibration curve.

Analyst's initials of "OUT" indicate that the analyte was analyzed by a subcontracted laboratory.

RE: Bloom Great Lakes Soil

Lab Orders:
13070161 13070186

Dear Ms. Judy Fassbender:

Enclosed are the analytical reports for the EMT Lab Orders listed. Also included with this analytical report is a copy of the chain of custody associated with these samples. If you have any questions, please contact me at 847-967-6666.

Sincerely,

A handwritten signature in black ink, appearing to read "Nathan Fey".

Nathan Fey
Project Manager

Approved by,

A handwritten signature in black ink, appearing to read "Marilyn Krueding".

Marilyn Krueding
Laboratory Director

This Report Contains 33 pages

The Contents of this report apply to the sample(s) analyzed. No duplication is allowed except in its entirety.

Lab Orders: 13070161 13070186

Date: 7/16/2013

CASE NARRATIVE

Unless otherwise noted, samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846, 3rd Edition

Unless otherwise noted, all method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives.

Sample results relate only to the analytes of interest tested and to the sample received at the laboratory.

All results are reported on a wet weight basis, unless otherwise noted. Dry weight adjusted results, reporting limits, method detection limits and dilution factors are indicated by the notation "dry" in the results column. If present, a dilution factor will adjust the method detection limits and reporting limits.

The test results contained in this report meet all of the requirements of NELAC. Accreditation by the State of Illinois or Wisconsin is not an endorsement or a guarantee of the validity of data generated. For specific information regarding EMT's scope of accreditation , please contact your EMT project manager.

The Reporting Limit listed on the Report of Laboratory Analysis is EMT's reporting limit for the analyte reported. For most test methods this reporting limit is primarily based upon the lowest point in the calibration curve.

Analyst's initials of "OUT" indicate that the analyte was analyzed by a subcontracted laboratory.

Lab Orders: 13070161 13070186

Date: 7/16/2013

CASE NARRATIVE

WO: 13070161

Analytical Comments for METHOD 8270_sson, lcsd-83091: LCS/LCSD RPD is outside of the laboratory control limit. Analytical Comments for METHOD 8270_sson, 13070161-02A: Surrogate recoveries were below the laboratory limits. Analytical Comments for METHOD 8270_sson, 13070161-03A: The reporting limits have been increased due to the matrix and difficulty in concentrating the sample down.

Analytical Comments for METHOD 8260_s, 13070161-03c: The recovery of internal standard was below the limit, possible due to the matrix. Sample was ran twice with the same outcome.

WO: 13070186

Analytical Comments for METHOD 8270_sson, mb-83132: Surrogate recoveries for two base neutral compounds were slightly below QC limits.

Analytical Comments for METHOD 8270_sson, 13070186-02a: The reporting limits have been increased due to the matrix and difficulty in concentrating the sample down.

RE: AOC 222 - Navy

Lab Orders:
13070879 13070918

Dear Ms. Judy Fassbender:

Enclosed are the analytical reports for the EMT Lab Orders listed. Also included with this analytical report is a copy of the chain of custody associated with these samples. If you have any questions, please contact me at 847-967-6666.

Sincerely,

Connie P. Rudey

for

Athan Fey
Project Manager

Approved by,

Marilyn Krueding

Marilyn Krueding
Laboratory Director

This Report Contains 40 pages

CASE NARRATIVE

Lab Orders: 13070879 13070918

Unless otherwise noted, samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846, 3rd Edition

Unless otherwise noted, all method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives.

Sample results relate only to the analytes of interest tested and to the sample received at the laboratory.

All results are reported on a wet weight basis, unless otherwise noted. Dry weight adjusted results, reporting limits, method detection limits and dilution factors are indicated by the notation "dry" in the units column. If present, a dilution factor will adjust the method detection limits and reporting limits.

The test results contained in this report meet all of the requirements of NELAC. Accreditation by the State of Illinois or Wisconsin is not an endorsement or a guarantee of the validity of data generated. For specific information regarding EMT's scope of accreditation , please contact your EMT project manager.

The Reporting Limit listed on the Report of Laboratory Analysis is EMT's reporting limit for the analyte reported. For most test methods this reporting limit is primarily based upon the lowest point in the calibration curve.

Analyst's initials of "OUT" indicate that the analyte was analyzed by a subcontracted laboratory.

Date: 8/2/2013

Project: AOC 222 - Navy

CASE NARRATIVE

Lab Orders: 13070879 13070918

WO 13070879:

Analytical Comments for METHOD 8270_WNEW, 13070879-13c, 09a, 14c: Surrogate recoveries were below the laboratory limits.

Analytical Comments for METHOD 8270_wnew, 13070879-08a: Surrogate recoveries were slightly below the laboratory limits.

Visual inspection of the metal containers for AOC 222 N and AOC 222 M revealed sediment material in the bottles labeled dissolve where the bottles labeled total. The bottles must have been switched or mis-labeled before entering the lab. The analytical results were switched to make the dissolved bottle the total and the total the dissolved for these samples.

AOC 13070918:

Analytical Comments for METHOD 8270_wnew, 13070918-01A: Surrogate recoveries were below the laboratory limits.

NAVAL STATION GREAT LAKES INSTRUCTION 11130.1

From: Commanding Officer, Naval Station Great Lakes

Subj: Ground Water Use Restrictions

1. Purpose. To ensure compliance with environmental regulations for activities and personnel located on Naval Station Great Lakes.
2. Scope. This instruction applies to all geographic areas of the Naval Station.
3. Discussion.

a. The use of ground water and surface water runoff for any purpose is strictly prohibited unless prior, written approval is obtained from the Commanding Officer, Naval Station Great Lakes. This includes, but is not limited to the installation of wells for any purpose, use of storm water runoff from streams or retention ponds, etc.

b. The only exception to this prohibition is the installation of ground water monitoring wells for the exclusive purpose of sampling ground water and monitoring of ground water/surface water. Approval for this activity must be secured in writing in advance from the Naval Station Great Lakes Environmental Department in coordination with the appropriate regulatory agencies.

4. Action. To initiate the process for installing a ground water well aboard the Naval Station, contact Naval Station Great Lakes Environmental Department, at (847) 688-5999 Or DSN 792-5999.
